Team confidentiality 3ʳᵈ meeting

Date: 20220825

Participants: Jubre and Hamad

The following points were discussed during our meeting:

- We need to create a web page/ web application
    - The main function is for users to access the site (login and sign up)
    - The portal is meant to share information and report it through the web page
- Users need to submit email, and contact information (this should be protected under GDPR)
- Create a user login page and a signup page for the users

- We need to keep it a simple minimal design with maximum functions built on Django and python.

The design document is going to be a page / single page as the maximum allowed content is 600 words.

(probably 2 pages) – log in or sign up page (then the reporting page)

- UML diagram
- Sequence diagram
- Database diagram
- Logic diagram
- Infrastructure diagram with security controls if it's hosted locally within NASA
- A UI / UX design would be good however none of us are programmers
